Corsair Productions – Net Meetings/Live Streaming Media

The following information is provided to help familiarize you with the system and procedures used by Corsair Productions for assembling and broadcasting live and on-demand net productions; including, webinars,

meetings, training sessions and executive messages.

There are many devices and systems that allow for these type of productions, what we are proposing is a portable, cost effective and feature rich alternative to some of the more complex set ups.

Basically it works like this, we will . . .

- assemble and produce any and all materials which would part of the presentation or event. i.e., video clips, audio clips, scripts, slides, photos etc.
- insert all of these elements into a programmed timeline, in chronological order.
- set up one or more cameras to capture live video content, usually the speakers/presenters.
- capture speaker audio via clip on or table microphones, depending on the circumstances.

Depending on your content you can broadcast via a dual window interface (fig. 1) or direct single stream (fig. 2)

(Fig 1) Sample Format: Simultaneous Video, Slides/Graphics

(Fig. 2) Sample Format : Live Streaming via Channel – Video and Graphics Combined

This is a one person production, portable enough to set up in a small conference room or office. The major advantage of our system is that it is software based, that is, no bulky or expensive video hardware is required. This eliminates the need a large operating space and multiple technicians.

The presenter or presenters concentrate on speaking while our operator advance the graphics and monitor the audio and video.

Examples for ideal usage:

Executive messages, advanced webinars, sales/HR training or marketing demo's that not only use video but also involve support materials (documents, slides, video clips etc) which may require detailed review or explanation.

Note: Two way audio is best accomplished via separate phone conference. A hard wire internet connection Is recommended. Larger, more complex meetings and events would require an alternative AV set up.

Please call with any questions or to set up a meeting. I would be happy to discuss various options and how we might best support your specific needs.

Thank You.
